top reactor sampler

Sentry Equipment Sells Top Reactor Sampler Product Line to ProSys Sampling Systems Ltd.

Oconomowoc, Wisconsin (June 9, 2009) – Sentry Equipment Corp announced the sale of its overflow top reactor sampler product line to ProSys Sampling Systems, an Irish company that specializes in the design and manufacture of sampling and containment equipment for the pharmaceutical industry. ProSys supplies and consults pharmaceutical companies worldwide.

The overflow top reactor sampler, Sentry Model MTR, is used predominantly by the pharmaceutical industry and is specially designed to take a representative sample from the top of a reactor vessel via a dip pipe. The fixed volume sample will not overflow the sample bottle and will not contaminate the vacuum source used to draw the sample. ProSys has been a long-time partner with Sentry relating to this product line and will continue to provide the same high quality product and support. The transition of manufacturing from Sentry to ProSys has been completed seamlessly to ProSys' facility in Ireland.

Sentry Equipment Corp is an employee-owned company that has been supplying engineered solutions since 1924. Since Sentry's acquisitions of Bristol Equipment Co. in 2003 and Gustafson Automatic Samplers in 2005, Sentry has become the company with the broadest range of sampling solutions and most sampling expertise in the world.
